

SR360

Skin Remover

What is Automatic Peeling Machine?

This machine can remove barks and soils of onions and root vegetables and let them out to the outlet with the firing power, vacuum pressure and air amplification instantaneously generated by the three-dimensional jet of compressed air. If you connect the water to the water inlet, peeling and cleaning effect is increased by generating mists in which water and compressed air are mixed.

Advantages

- Simple structure and easy to use
- Available even by unskilled workers
- Light-weight and compact size for easy moving/transportation
- Long service life, no failure and low maintenance costs
- Increased value of the products with no/less damage
- Easy treatment of by-products
- Less consumption of compressed air by sensor operation

Peeling Before

Peeling After

Peeling Image

Air Consumption By The Use Of Inlet (ℓ/min)

Pressure (kg/cm ²)	Large Inlet (Spring Onion)		Small Inlet (Chives)		Comp Specifications 'Reference'	
	1EA	2EA	1EA	2EA	Output (KW/HP)	Air Content (ℓ/Min)
5	1,100	2,200	530	1,060	11 / 15	1,909
6	1,300	2,600	610	1,220	15 / 20	2,518

※ Time of peeling : 2~3 sec. / According to Quality of green onion, peeling time could be different.
